

Overview

User Group Permissions allows permissions to be set on content nodes by user type rather than by individual users.

Updated for Umbraco 7

User Group Permissions is the Umbraco 7 version of [Usergroup Permissions](#).

Interoperable

This package works with the existing Umbraco permission system, so you are still able to set permissions for individual users.

Source Code & Attribution

The source code is available on [GitHub](#). It is based on the original codebase [here](#) and another fork [here](#). The original was created by Richard Soeteman, and additional work was done by Carl Jackson.
