## What is this package for?

The RVCountries package allows you to easily place a dropdown list of countries in forms.

The list of countries is generated from list of dictionary items so you can use a translated list of your own language.

## Main Features

- Razor syntax
- More than 250 countries in the list
- Multi language support
- The package comes with list of countries written in English and Hebrew. If you didn't create a language of "Hebrew (Israel)" in Umbraco, the package will only add the dictionary items with the values written in English.

## Installation

You can download the package at <http://our.umbraco.org/projects/website-utilities/rvcountries-multilingual-country-list-dropdown>

The package will install the following files:

- The razor macro  
/macroScripts/RVCountriesDropdown.cshtml
- Dictionary Items: RV.Countries + child nodes

## Using

Place the RVCountries Dropdown macro in your template or rich text editor.

```
<umbraco:Macro Alias="RVCountriesDropdown"  
runat="server"></Umbraco:Macro>
```

Another option is to call directly to the macro from another macro using RenderPage. Ex:

```
@RenderPage("RVCountriesDropdown.cshtml")
```

## Important Notes

- The package works with Umbraco 4.7+.
