

Amazon S3 Umbraco package

Please be aware that to use this plugin you need to sign up to the <http://aws.amazon.com/s3/> and create an account which does have very minimal costs attached to it <http://aws.amazon.com/s3/#pricing> for which we are not responsible for.

The Amazon S3 Project will allow you to create folders and upload files to specified folders which you have created within your S3 account.

To install simply do the following:

1. Install the package by logging into Umbraco and going to the Developer → Packages → Install local package.
2. Browse to the .zip file call “Amazon S3 1.1.zip” and press “Load package”
3. Then go to Data Type → Amazon S3 and enter the required fields which can be found in your Amazon S3 account
4. Go to Settings → Document Type → Then add the Amazon S3 to your doc type.

What will this package install?

AmazonS3.config – This stores the S3 configuration details

TomMaton.Umbraco.AmazonS3.dll – This does all the magic

AmazonS3.ascx – This the control which creates a tab within the Media section so you can manager your S3 account
